

# The Ivy GBM Study:

Identify inhibitors of human glioblastoma stem cells

## PRINCIPAL INVESTIGATORS:

**Greg Foltz, M.D.**  
*Swedish Neuroscience Institute*

**Parvinder Hothi, Ph.D.**  
*Swedish Neuroscience Institute*

## OBJECTIVES:

- Expand on pilot study results, published in [\*Oncotarget\*](#) on Oct. 23, 2012, that show promise for new treatment options for glioblastoma multiforme (GBM).
- Conduct pre-clinical trials to further validate the use of Disulfiram, an existing FDA-approved treatment for alcoholism, for the treatment of GBM.
- Test an additional 50,000 drug candidates against an expanded sample of patient-derived glioblastoma stem cells.

## PROGRESS REPORT:

- *Research is currently underway and results will be reported at a later date.*
